Hiring Committee

Goodwill Industries International

Data Center of Excellence

Dear Hiring Committee,

I am writing to express my enthusiasm for the **Data Analytics Intern** position within Goodwill Industries International's Data Center of Excellence. As a current M.S. in Data Science student at The George Washington University, I'm passionate about transforming complex data into meaningful insights that advance mission-driven work—exactly what this internship represents.

In my recent role as a **Data Scientist Intern at Xampus**, I developed and maintained Python and SQL pipelines that processed over **6,000 records weekly**, implemented automated data validation checks, and built **Power BI dashboards** to visualize program outcomes. These projects sharpened my ability to clean, organize, and communicate data effectively—skills I know are central to this internship's focus on grant-related dashboards and reporting.

As Co-Founder and Product Lead at Stoffer, I worked cross-functionally with local partners to improve data accuracy and engagement. By **training 100+ users** on data reporting and introducing validation scripts, I reduced submission errors by **42%** and enhanced data reliability for business and community outcomes. This experience taught me the importance of clear communication, collaborative problem-solving, and designing data systems that people can trust.

Goodwill's mission—to help individuals and communities thrive through opportunity and data-driven insight—resonates deeply with my own values. I am especially drawn to this internship's combination of technical challenge and social purpose, and I'm eager to contribute to the development of scalable, accurate, and visually impactful grant dashboards that reflect Goodwill's national reach.

Thank you for considering my application. I would be excited to bring my technical foundation, analytical mindset, and passion for social impact to the Goodwill Data Center of Excellence team.

Warm regards,

**Vishal Fulsundar**
